Academia & Industry**

for **Stroke**  
**prEvention**

Arlington VA, USA 10/7-8  
2024

Stroke is a leading cause of death and serious long-term disability worldwide, with an estimated global prevalence of over 104.2 million people. With about 6.2 million deaths attributed to cerebrovascular diseases annually, ischemic/haemorrhagic strokes remain major threats to public health. There is no indication that these numbers changed

significantly despite advances in modification of risk factors and specific preventive treatment of some etiologic factors.

One major challenge is the highly heterogenous nature of potential causes of stroke, which require a concerted multidisciplinary approach to design and conduct of clinical prevention trials. Failures in such clinical trials have been exceedingly more common than successes, an important fact that points to the need for improvement in their design/conduct through **better collaboration among the major stakeholders: the academia, government-based funding and regulatory organizations and the industry.**

### Get the Latest Updates!

Recent & ongoing research studies, novel therapeutics

### Meet Different Stakeholders!

Academia, Funding/Regulatory agencies, Industry

## Get Inspired!

Hear cutting-edge research, ask questions and provide your feedback

## Change the Future!

This is the platform to make a lasting impact on the future of stroke prevention research

### [Learn More](#)

The 2nd edition of Roundtable of Academia & Industry for Stroke prEvention (RAISE II) will create a multidisciplinary platform that would allow collaborations of public and private sector experts to share their knowledge and achieve consensus on strategies intended to improve stroke prevention approaches through advances in research studies and clinical practice. RAISE II will include a broad multidisciplinary collaboration as the primary clinical disciplines involved in stroke prevention efforts not only include neurology but also cardiology (including all of its subspecialities) and primary care.
